

The pre-made antcapping, corner piece.

Here are a few advantages to consider:

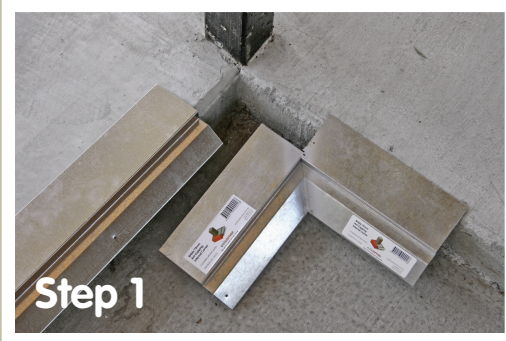

Builders Mate

- No more sharp corners
- Labour cost reduced by 80% as no on site mitres cuts or soldering by carpenters
- Carpenters can lay Ant capping to entire house within 1hr
- Carpenters are able to stand the frame within hrs of starting on site
- Much cleaner & precise finish
- Perfectly formed right angle corners
- Structural welded joints to reduce penetration by ants
- Structural welds provide extra strength where corners are cut for steel columns

Carpenters Best Friend

- Quick and simple to use
- No more on site cutting
- Takes max 2 mins to install internal & external corners
- Pre made caps are made to fit over straight lengths of ant capping thus no measuring required between two fixed points

Made from galvanised steel this great product is for utilisation within the building industry as a faster and cheaper alternative to customised onsite fabrication.

Step 1
Straight lengths of ant capping are laid out in position, note length is not critical as corner caps fit over standard straight sections neatly.

Step 3
The next corner cap is then laid over the following section to form the preceding corner.

Suitable for use on either slab on ground or with combination of slabs & steel columns as corners are welded.

Step 2
The premade Corner cap is positioned over straight lengths of capping to form internal or external corner.

Step 4
Internal and external corners are formed as EZI as that. Once position is confirmed corners can be pop riveted to straight sections if required.

The use of pre made corners saves on site manufacturing time of up to 30mins per corner for carpenters.

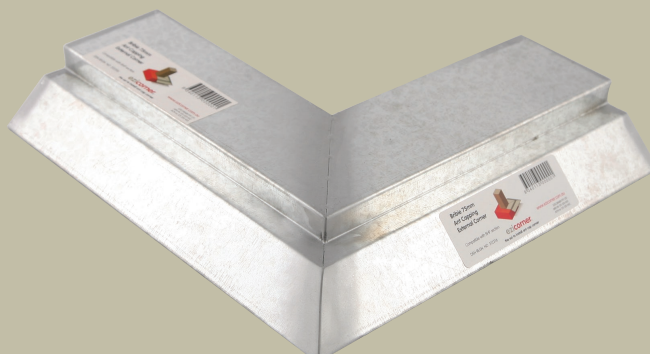

Profiles & Sizing

- Available in internal and external corners,
- One size fits all, 50 & 75mm capping
- Available in "Standard" and "Bribie" profile

Standard 75mm Capping

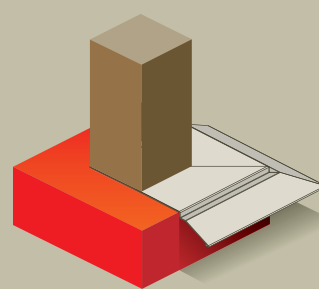

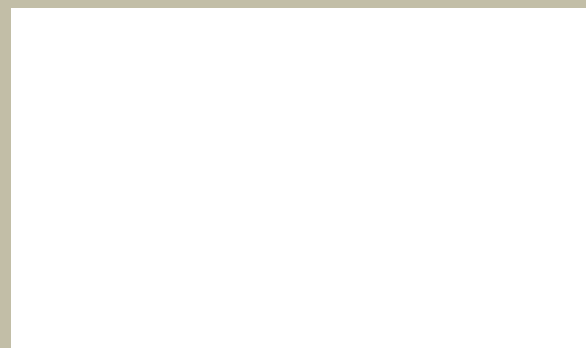

DSN REGN. NO 312315

Bribie 75mm Capping

DSN REGN. NO 312316
